1 INTRODUCTION

This is a report of key findings from the *Oregon Student Wellness Survey*, a survey of 6th, 8th and 11th grade youth, conducted in the spring of 2010. The *Oregon Student Wellness Survey* is an anonymous and voluntary survey sponsored by the Oregon Department of Human Services (DHS) in collaboration with the Oregon Department of Education. DHS contracted with International Survey Associates to recruit schools, administer the survey and report survey results. The survey was available free of charge to all Oregon schools that chose to participate including public, charter and private. Schools that agreed to participate in the *Oregon Student Wellness Survey* were given the option of administering the survey either online over the Internet or by paper and pencil with the schools determining which method would be best for their particular circumstances.

The *Oregon Student Wellness Survey* was designed to assess a wide range of topics that included school climate, positive youth development, mental health, substance use, problem gambling, fighting and other problem behaviors. In addition the survey collected information about risk and protective factors associated with these behaviors.

Student Wellness Survey results are used by schools, state and local agencies, organizations and communities to assess and monitor the health and well being of Oregon youth and the environments in which they live. *Student Wellness Survey* data can serve as a valuable tool for program planning, implementation, and evaluation. The data are essential information for communications with legislators and the public, and communities and local agencies will find the data improves their ability to procure funding by providing the baseline data needed for grant writing. In these ways, schools, communities and policy makers will find themselves poised to make effective decisions about health related policies, services, programs and educational activities.

The *Oregon Student Wellness Survey* was designed as a split survey. The 6th grade version of the survey consisted of a subset of the questions found on the 8th and 11th grade versions. In order to provide results that spanned all grade levels in a single report, the data for questions that did not appear on the 6th grade version appear in this report as missing.

This report is divided into topic specific sections. Each section provides a brief overview of the topic, followed by summary data tables that include results for all three grades and compares local data to that of the state. The state data for this report has been weighted based on enrollment numbers. The ESD data in this report has also been weighted.

1.2 Race and Ethnicity

Schools throughout Oregon vary considerably in the racial and ethnic composition of their students. The *Student Wellness Survey* asks one question about race and another about Hispanic or Latino ethnicity.

The table below shows the percentage of students that self-identified as...

Table 2: Race and Ethnicity

2 SCHOOL CLIMATE

School climate is an important issue to parents, administrators and the community. The environment within a school directly impacts students' academic, social, emotional and mental states. Respectful, supportive relationships among students, teachers and parents are fundamental. When students have opportunities to collaborate and share a sense of purpose and ideals, students, faculty and staff look forward to walking through the schoolhouse door. When students are attached to school and to prosocial teachers and peers, they are more likely to behave in prosocial ways themselves, and to avoid engaging in high-risk behaviors.

There is strong evidence that the learning environment influences student attachment to school. Classroom and school interventions that make the learning environment safer, more caring, better managed and highly participatory and that enhance students' social competence have been shown to increase student attachment to school. A comprehensive assessment of school climate involves input from students, faculty and staff on a wide range of topics. The data collected with the *Oregon Student Wellness Survey* deals exclusively with the student perception aspect of school climate. It provides an assessment of whether students feel they belong, are valued and physically and emotionally safe at school.

2.1 Supportive Atmosphere

In supportive atmospheres students feel more comfortable approaching and interacting with teachers and peers, thereby strengthening their relationships.

The table below reports the percentage of students that agree with the following statements.

Table 5: Supportive Atmosphere

2.2 Attachment to School

Students who feel their courses are interesting, assignments are important, and what they are learning in school will be valuable to them later in life, are better prepared to make successful transitions after graduation. Young people who do not feel a part of society, are not bound by rules, don't believe in trying to be successful or responsible are at high risk of academic failure and developing mental, emotional or behavioral disorders.

The table below reports the percentage of students that reported "often" or "almost always." for the first three questions, "very interesting" or "quite interesting" for the fouth question and "very important" or "quite important" for the fifth question.

2.3 Opportunities for Participation

When young people are given many opportunities to participate meaningfully in school activities that are important to them, they are less likely to engage in problem behaviors. When opportunities are available for positive participation outside of class, children are less likely to engage in substance use, and other problem behaviors.

The table below shows the percentage of students that agree with the following statements about their school.

2.4 Safe Environment

Students who are harassed, feel unsafe or otherwise victimized are more likely to cut classes, skip school, feel depressed or are involved in problem behaviors. Comprehensive discipline, positive behavior support and anti-bullying programs in schools have been shown to reduce the incidence of harassment.

3 POSITIVE YOUTH DEVELOPMENT

High levels of positive youth development are strongly associated with increased healthy behaviors and decreased risk behaviors among youth. In 2006, DHS Public Health Division and the Oregon Commission on Children and Families established a statewide benchmark to measure Positive Youth Development (PYD) among Oregon 8th and 11th graders.

3.1 PYD Benchmark

The benchmark consists of 6 questions. Each measures a different component of PYD: physical health, emotional/mental health, competence, confidence, support and service. Students that answer at least 5 of the 6 questions in a positive manner (i.e., excellent/very good/good or very much/pretty much true) are considered to have met the state benchmark.

Table 11: PYD Benchmark

	Grade 8		Grade 11	
	Esd	State	Esd	State
Strong positive youth development	57.1	60.3	63.6	66.0
Weak positive youth development	42.9	39.7	36.4	34.0

Percentages exclude missing answers.

This item was not asked on the 6th grade survey.

3.2 General Health

Two questions are asked as an assessment of student health. The following table reports the percentage of students that responded to the questions with "good", "very good", or "excellent."

4 MENTAL AND EMOTIONAL HEALTH

Good mental and emotional health makes it easier for youth to establish constructive interpersonal relationships, succeed in school and make a successful transition into the workforce. Depression and psychological distress can interfere with the development of positive teacher and peer relationships. Youth with depression or high levels of psychological distress may find it difficult to focus on academics. They are more likely to smoke, drink alcohol or use other drugs and they are at increased risk of suicide.

The *Oregon Student Wellness Survey* asks questions about emotional and mental health, depression, suicide thoughts and suicide attempts. The survey also asks a series of five questions known as the Mental Health Inventory (MHI-5). When responses for all five are considered together, the result is an estimate of the level of psychological distress that youth are experiencing. MHI-5 scores range from five to 30. Scores of 21 or higher are an indication that youth may be experiencing a mental health concern that requires further assessment.

4.1 Psychological Distress

This table shows the percentage of students with high levels of psychological distress during the past 30 days based on an MHI-5 score of 21 or higher.

Table 14: Psychological Distress

	Grade 6		Grade 8		Grade 11

This item was not asked on the 6th grade survey.

The following table contains data on each of the five Mental Health Inventory questions. This series of questions asks about how the student was feeling during the past 30 days. The table reports the percentage of students that indicated "a good bit of the time," "most of the time", or "all of the time."

These items were not asked on the 6th grade survey.

4.2 Depression and Suicide Ideation

Suicide is the second leading cause of death among Oregon youth aged 10-24. Depression is the most common underlying cause of suicide. The following table reports the percentage of 8th and 11th grade students that had signs of depression, thoughts about suicide, or actually attempted suicide during the last 12 months.

5 PROBLEM GAMBLING

Students today are increasingly being exposed to gambling opportunities - on the Internet, in the community, at home and even at church - so it's no surprise that problems associated with gambling are being seen in youth. It's generally not perceived nor treated as risky, yet research shows that youth who gamble are much more likely to engage in other risky behaviors such as drinking, smoking and using drugs and some of them will go on to develop serious gambling problems.

The adolescent brain is developmentally inclined towards risk, minimal consideration of consequences, preference for stimulation and novelty, all of which gambling offers in abundance.

The *Oregon Student Wellness Survey* asks a series of questions that address and measure various gambling activities. Students were asked questions regarding the types of gambling they participated in, their feelings about being involved in gambling and the degree to which parents and teachers have communicated to the students the risks involved in engaging in this particular activity.

Gambling can be addictive, yet most youth and parents treat it as harmless entertainment. The following tables and charts contain data on gambling questions. These percentages are provided by grade level and statewide data are included for comparison purposes. For more information on youth gambling in Oregon, including more data and educational resources, go to www.problemgamblingprevention.org

5.1 Types of Gambling

Gambling involves betting anything of value (money, a watch, soda, etc.) on a game or event. The following table shows the percentage of students that participated in these types of gambling in the last 30 days.

Table 17: Types of Gambling

Percentages exclude missing answers.

5.2 Risk of Problem Gambling

Most youth don't have large sums of money to spend on gambling, so this measure must be looked at within that context. The fact that youth are spending any money on a potentially addictive behavior is of concern, and some youth spend significant amounts on it. Even those who spend a small amount of money are still "spending" time and attention on gambling at the expense of other activities and responsibilities. By the time they get into college, where problem gambling rates are among the highest and the average college student gets 25 credit card solicitations a year, some youth have developed seemingly innocent gambling habits that will cost them dearly.

The following table shows the amount of money 8th and 11th grade students bet in any form (lottery, card games, bingo, Internet, sports, with friends) in the past three months.

Table 18: Gambling Amounts

	Grade 8		Grade 11	
	Esd	State	Esd	State
0	61.6	63.5	66.0	68.1

$11-$50	9.0	8.1	8.0	7.9
Over $50	6.5	5.6	4.8	5.4

Percentages exclude missing answers.

This item was not asked on the 6th grade survey.

The next table shows the percentage of 8th and 11th grade students that reported the following signs of problem gambling in the last 12 months. The last two questions (lied about/bet more) are based on a valid and reliable problem gambling screening instrument which has been used for many years; saying yes to either of these is highly correlated to a potential gambling problem and indicates a need for further assessment by a trained counselor.

6 SUBSTANCE USE

Smoking is the number one preventable cause of disease and death in this country. Most adult smokers start smoking before the age of 18. Of the 20 adolescents in Oregon who begin smoking each day, one-third will die prematurely from tobacco-related diseases.

Alcohol is the country's most widely used legal drug and, despite the fact that it is illegal to purchase alcohol under 21 years of age, its use is widespread in teens. The brain goes through dynamic change during adolescence, and alcohol can seriously damage long- and short-term growth processes. The American Medical Association warns that damage from alcohol at this time can be irreversible.

Marijuana is the country's most widely used illicit drug. Nationally, nearly half of all high school seniors report some use of marijuana in their lifetime. Recent studies by the Substance Abuse and Mental Health Services Administration show weekly or more frequent use of marijuana doubles a teen's risk of depression and anxiety and can cause other mental illness.

During the elementary school years, most children express anti-drug, anti-crime and pro-social attitudes and have difficulty imagining why people use drugs. However, in middle school, as more youth are exposed to others who use cigarettes, alcohol or other drugs, their attitudes often shift toward greater acceptance of these behaviors.

6.1 Abstinence from Substance Use

The following table shows the percent of students that indicated in their lifetime, they "never have"...

6.3 Average Age of First Use

Onset of drug use prior to the age of 15 is associated with a much greater risk of developing dependency. The earlier the onset of any substance use, the greater the involvement in other drug use and the greater the frequency of use. Later age of onset of substance use has been shown to predict lower drug involvement and a greater probability of discontinuation of use.

Among students that have ever used, the table below shows the average age (in years) when they first...

6.4 Factors Associated with Initiation of Substance Use

This section reports on a variety of factors associated with initiation of substance use. Easy availability, attitudes about use, perceptions about the risk of harm from use and communication about substance use all influence whether young people choose to use tobacco, alcohol or other drugs.

6.5 Availability

Adolescents that report easy availability of cigarettes, alcohol, marijuana, and other illegal drugs are more likely to use these substances. Research has shown that legal restrictions on alcohol and tobacco use, such as raising the legal drinking age, restricting smoking in public, and increased taxation have been followed by decreases in consumption.

The table below shows the percentage of students that said it would be "easy" or "very easy" for the student to get...

6.6 Parental Attitude toward Substance Use

In families where parents are heavy users of alcohol, use illegal drugs or are tolerant of children's use, adolescents are more likely to engage in substance use. The risk is further increased if parents involve children in their own using behavior such as asking the child to light the parent's cigarette or get the parent a beer from the refrigerator.

The *Student Wellness Survey* asks students about how their parents would feel if the student used alcohol, cigarettes or marijuana. The table below reports the percentage of students that said their parents feel it would be "wrong" or "very wrong" for youth to...

6.8 Perceived Risk of Harm

Students who do not perceive cigarette, alcohol or marijuana use to be risky are far more likely to engage in use.

7 DRUG FREE COMMUNITIES CORE MEASURES

The Drug-Free Communities (DFC) Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which are typically referred to as the Core Measures. Grantees are required to report on three drug categories: tobacco, alcohol and marijuana. A number of Oregon DFCs focus on other substances, so this report also includes 30-day use data for binge drinking, prescription drugs, methamphetamines, and any illicit drugs other than marijuana.

Data in the tables that follow are provided by grade level. For each drug, and at each grade level, the percentage of students who responded positively to the question and the number of students who responded to the question are reported. For Average Age of Onset, the average age of first use in years and the number of students using is reported. The possible responses to this question range from 10 or under to 17 or older. The table shows the average age of onset of use by those students who answered the question with a response other than "never used."

8 RISK AND PROTECTIVE FACTORS

Risk and protective factor-focused prevention is based on a simple premise: to prevent a problem from happening, identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. The Social Development Research Group at the University of Washington defined a set of risk factors for drug abuse. They include characteristics of school, community, and family environments as well as characteristics of students and their peer groups that are associated with increased likelihood of drug use, delinquency, and violent behaviors among youth.

The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later, even though they were exposed to the same risks as children who exhibited behavior problems. Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors include social bonding to family, school, community and peers, and healthy beliefs and clear standards for behavior (Hawkins, Catalano & Miller, 1992; Hawkins, Arthur & Catalano, 1995; Brewer, Hawkins, Catalano & Neckerman, 1995).

The premise of the risk and protective factor approach is to promote positive youth development and prevent problem behaviors by addressing the factors associated with the problem. By measuring risk and protective factors in a population, specific risk factors that are elevated and widespread can be identified and targeted by preventive interventions that also promote related protective factors.

The *Oregon Student Wellness Survey* collects data on an essential set of risk and protective factors. The tables that follow give the percentage of students whose factor scores exceed a national norm for each factor. The bars of the graphs indicate the percentage of students whose calculated factor scores exceed the national norm for the particular factor. The percentage figures for the state as a whole are indicated on the graph by the red line for each factor. The lime green dashed line indicates the percentage based on the seven state national normed database. In the tables and charts that follow, if, for example, the percentage for a risk factor was 45.3 that would mean that 45.3 percent of the students had a factor score that was above the cutoff for that particular factor. Ideally, risk factors would have low percentages and protective factors would have high percentages.

A FREQUENCY DISTRIBUTION TABLES

This section contains frequency distribution tables for all of the questions found on the 2010 Oregon Student Wellness Survey. Two versions of the survey were used, one for 6th grade and another for 8th and 11th grades. The 6th grade survey consisted of a subset of the questions found on the 8th/11th grade version. In order to provide results that spanned all grade levels in a single report, the data for questions that did not appear on the 6th grade version were coded as missing.

Oregon Student Wellness Survey for Grade 6

DHS Oregon Department of Human Services

1. The survey is completely voluntary and anonymous. DO NOT put your name on the questionnaire.

2. This is not a test, so there are no right or wrong answers. We would like you to work quickly so you can finish.

3. All of the questions should be answered by completely filling in one of the answer spaces. If you do not find an answer that fits exactly, use the one that comes closest. If any question does not apply to you, or you are not sure what it means, just leave it blank. You can skip any question that you do not wish to answer.

4. For questions that have the following answers: **NO! no yes YES!**
   Mark (the BIG) **YES!** if you think the statement is **DEFINITELY TRUE** for you.
   Mark (the little) **yes** if you think the statement is **MOSTLY TRUE** for you.
   Mark (the little) **no** if you think the statement is **MOSTLY NOT TRUE** for you.
   Mark (the BIG) **NO!** if you think the statement is **DEFINITELY NOT TRUE** for you.

   Example: Chocolate is the best ice cream flavor.

   ○ **NO!** ○ **no** ● **yes** ○ **YES!**

   In the example above, that student marked "yes" because he or she thinks the statement is mostly true.

5. Please mark only one answer for each question by completely filling in the oval with a #2 pencil.

Oregon Student Wellness Survey for Grades 8 & 11

1. The survey is completely voluntary and anonymous. DO NOT put your name on the questionnaire.

2. This is not a test, so there are no right or wrong answers. We would like you to work quickly so you can finish.

3. All of the questions should be answered by completely filling in one of the answer spaces. If you do not find an answer that fits exactly, use the one that comes closest. If any question does not apply to you, or you are not sure what it means, just leave it blank. You can skip any question that you do not wish to answer.

4. For questions that have the following answers: **NO! no yes YES!**
   Mark (the BIG) **YES!** if you think the statement is **DEFINITELY TRUE** for you.
   Mark (the little) **yes** if you think the statement is **MOSTLY TRUE** for you.
   Mark (the little) **no** if you think the statement is **MOSTLY NOT TRUE** for you.
   Mark (the BIG) **NO!** if you think the statement is **DEFINITELY NOT TRUE** for you.

   Example: Chocolate is the best ice cream flavor.

   ○ **NO!** ○ **no** ● **yes** ○ **YES!**

   In the example above, that student marked "yes" because he or she thinks the statement is mostly true.

5. Please mark only one answer for each question, unless otherwise directed, by completely filling in the oval with a #2 pencil.
